Career Objective

Enthusiastic Computer Science and Design graduate skilled in backend development, RESTful APIs and scalable system design. Eager to contribute to a dynamic engineering team with strong problem-solving and full-stack development skills.

Education

MVJ College of Engineering, Bangalore

- B.E. in Computer Science and Design

CGPA: 8.34

Prism PU Science College, Dharwad

- Pre-University Course (PCMCs)

Percentage: 82%

Experience

Web Developer Intern – Dotch Endeavours Pvt. Ltd. Mysuru

- Engineered a scalable food ordering platform, streamlining the workflow for order management and reducing customer support response times.
- Developed a centralized admin dashboard to facilitate real-time order tracking, user lifecycle management and efficient ticket resolution.

Projects

ServiceFlow - Major Project

- Developed a location-based service hiring platform with Maps API integration for radius-based provider discovery, real-time chat (Redis), booking management, and ratings/reviews.
- Implemented DeepFace-based face verification for secure provider onboarding, enabling trusted profiles and enhancing overall platform reliability.

Rentova – Peer-to-Peer Equipment Rental Platform

- Built a peer-to-peer equipment rental platform enabling users to list, rent, and manage tools or machines with booking workflows, wallet system, real-time notifications and chat.
- Implemented owner verification, secure media handling and radius-based equipment discovery, allowing individuals and small businesses to earn by renting underused equipment.

Body Fat Prediction

- Built a machine learning system to predict body fat percentage using physical measurements, improving accuracy by 15% through optimized feature engineering and model tuning.

Skills

Languages: Java, Python, SQL, JavaScript.

Technologies:

- Frontend: ReactJS, HTML, CSS
- Tools: Redis, Git, Postman
